Benchmark overview

scCCVGBen — Single-cell CCVGAE Benchmark

scCCVGBen is a curated benchmark suite of **200 single-cell omics datasets** (100 scRNA-seq + 100 scATAC-seq) designed to evaluate the CCVGAE family of methods along three axes: **14 graph encoder variants**, **5 graph construction choices**, and **13 dimensionality-reduction baselines**.

This site documents the *benchmark itself* — the datasets, the compared methods, and the evaluation metrics. For the numerical results and the statistical analysis, please refer to the accompanying paper.

Method catalog

Methods

Every method compared in scCCVGBen falls into one of three categories. The full list below is auto-generated from `site/data/methods.json` (see `scripts/build_site_data.py`).

scCCVGBen graph encoders (14)

GAT ATT
Graph Attention Network (Veličković 2018)

GATv2 ATT
Dynamic attention Graph Attention v2 (Brody 2022) — scCCVGBen extension

Transformer ATT
TransformerConv — Attention is All You Need graph variant (Shi 2020)

SuperGAT ATT
Self-supervised edge prediction GAT (Kim 2020) — scCCVGBen extension

GCN MP
Graph Convolutional Network (Kipf 2017)

SAGE MP
GraphSAGE inductive (Hamilton 2017)

Graph MP
GraphConv — general message-passing variant

Cheb MP
ChebNet — Chebyshev polynomial filters (Defferrard 2016)

TAG MP
Topology-Adaptive Graph Conv (Du 2017)

ARMA MP
ARMA filter Conv (Bianchi 2021)

SG MP
Simplified Graph Conv (Wu 2019)

SSG MP
Simple Spectral Graph Conv (Zhu 2021)

GIN MP
Graph Isomorphism Network (Xu 2019) — scCCVGBen extension

EdgeConv MP
Dynamic Edge Conv (Wang 2019) — scCCVGBen extension

Graph construction methods (5)

kNN_euclidean GRAPH
Standard k-NN with Euclidean distance (k=15) — CCVGAE benchmark default

kNN_cosine GRAPH
k-NN with cosine similarity — rewards direction, invariant to magnitude

snn GRAPH
Shared Nearest Neighbour — 2 cells connected if they share a fraction of neighbours

mutual_knn GRAPH
Mutual k-NN — only edges where both cells are in each other's k-NN list; stricter connectivity

gaussian_threshold GRAPH
Gaussian heat-kernel weights $w=\exp(-d^2/(2\sigma^2))$; edges pruned at threshold 0.9

Dimensionality-reduction baselines (13)

PCA BASE
Linear PCA — sklearn.decomposition.PCA

KPCA BASE
Kernel PCA (RBF) — sklearn.decomposition.KernelPCA

ICA BASE
Independent Component Analysis (FastICA) — sklearn.decomposition.FastICA

FA BASE
Factor Analysis — sklearn.decomposition.FactorAnalysis

NMF BASE
Non-negative Matrix Factorisation — sklearn.decomposition.NMF

TSVD BASE
Truncated SVD — sklearn.decomposition.TruncatedSVD

DICL BASE
Dictionary Learning — sklearn.decomposition.DictionaryLearning

scVI BASE
Single-cell Variational Inference — Lopez 2018

DIP BASE
DIP-VAE disentangled autoencoder — Kumar 2017

INFO BASE
InfoVAE — Zhao 2017

TC BASE
β-TCVAE — Chen 2018

highBeta BASE
Hyper-parameterised VAE with high β (β=100)

CCVGAE BASE
Reference CCVGAE — upstream baseline; scCCVGBen extends this with 12 encoder + 5 graph variants

Dataset detail page

GEO title

> scRNAseq reveals mechanisms of Merkel cell carcinoma acquired immunotherapy resistance [1]

Description (local manifest)

GSE117988_MCCPBMCCancer

Metric registry

Evaluation Metrics

scCCVGBen scores every (dataset, method) pair on 26 metrics grouped into three families. The list below is auto-generated from `site/data/metrics.json`.

Clustering quality (6)

External labels, cluster separation, and original-space distance preservation.

`ASW` `DAV` `CAL` `NMI` `ARI` `COR`

Dimensionality-reduction evaluation — UMAP + tSNE (10)

Neighbourhood preservation and global structure after UMAP/tSNE projection.

`distance_correlation_umap` `Q_local_umap` `Q_global_umap` `K_max_umap` `overall_quality_umap` `distance_correlation_tsne` `Q_local_tsne` `Q_global_tsne` `K_max_tsne` `overall_quality_tsne`

Latent-space intrinsic geometry (10)

Intrinsic latent geometry, robustness, trajectory signal, and interpretation.

`manifold_dimensionality_intrin` `spectral_decay_rate_intrin` `participation_ratio_intrin` `anisotropy_score_intrin` `trajectory_directionality_intrin` `noise_resilience_intrin` `core_quality_intrin` `overall_quality_intrin` `data_type_intrin` `interpretation_intrin`
